Blockchain Core & Backend Engineer with a focus on bridging the gap between **backend architecture** and **low-level protocol engineering**. Transitioned from writing DApps to building **orchestration engines**, modifying **Go-Ethereum (Geth)** internals, focusing on **execution algorithms**, EVM optimization, and integrating **Post-Quantum Cryptography**. Currently at Vlinder, engineering performant backend microservices and custom blockchain protocol forks.

WORK EXPERIENCE

Ethereum Core (Go-Ethereum)

Open Source Contributor • Remote

06/2025 - Present

- Recognized in the **Top 100 contributors** out of 1400 contributors (10+ merged PRs) to the primary implementation of ethereum securing over **\$300B** in assets. ([contributions](#))
- **EIP Implementation**: Authored an implementation of **EIP-7954** ([PR #33832](#)) in go-ethereum and validated against the full execution-specs state test suite.
- **API Standardization**: Implemented blockTimestamp support in `eth_getTransaction*` to align with **Execution API Spec**. Eliminating the need for secondary block lookups by consumers ([PR #33709](#))
- **Account Abstraction**: Drafted an implementation of EIP-8141 (Native Account Abstraction) to evaluate complexity for client teams and assess its practical implications at the protocol level. ([PR #33954](#)) ([Blog](#))

Vlinder (Web3 Infrastructure & Blockchain Labs)

Blockchain Core & Backend Engineer • Bangalore, India

07/2023 – Present

Core Blockchain Infrastructure

- **Protocol Engineering**: Architected a custom **Geth (Go - Ethereum)** fork integrating **SLH-DSA (Post-Quantum Cryptography)**, rewriting the **core/types** transaction envelope to handle quantum-safe signature payloads.
- **Performance Optimization**: Achieved a **500%** increase in block throughput by enabling compiler-level optimizations (**O3 flags**) in the build pipeline, reducing cryptographic verification time from **30ms to 3ms**.
- **Network Layer**: Modified the Geth **mempool**, **propagation**, and **EVM Internal** logic to accept larger **PQC signature sizes**, ensuring network stability under heavy load.

Backend Systems & Algorithms

- **System Architecture**: Engineered a modular backend using **Hexagonal Architecture** and **NestJS**, ensuring strict **separation of concerns** between **business logic**, **database**, and **transport layers**.
- **Complex Orchestration**: Implemented **Temporal.io** to manage long-running, durable workflows, ensuring fault tolerance and state recovery for critical asynchronous tasks
- **Graph Algorithms (CPM)**: Designed a project planning engine using **Directed Acyclic Graphs (DAGs)** and the **Critical Path Method (CPM)** to calculate task dependencies and timelines for complex schedules dynamically.
- **Security & Auth**: Secured services using **SSO** and **JWT**, implementing **RBAC/ABAC** policies for stricter access control

National Engineering College / Tech Summits

Visiting Mentor & Technical Speaker • India

01/2024 - Present

- **Curriculum Design**: Served as an Industry Mentor for a 3-credit academic course, designing the syllabus and guiding 50+ students through **Backend** and **Blockchain Protocols**.
- **Public Speaking**: Delivered keynotes and technical workshops at regional tech summits, educating **500+ attendees** on consensus mechanisms, **EVM internals**, and Web3 infrastructure.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering • Anna University - NEC India

- Achieved a CGPA of **9.1/10**, **graduated with honors**, ranking in the **Top 5%** of the graduating cohort.

SKILLS AND AWARDS

- **STRAT-EX (Chainlink Hackathon)**: Collaborated with a 5-person **global team** across **4 countries** to build an automated decentralized bot that leverages Chainlink services and Uniswap to execute optimized buy and sell operations.
- Achieved **Institution Rank 1** on GeeksForGeeks, solving 3000+ DSA problems across various platforms.
- **Languages & Technologies**: TypeScript (NestJS), Go, Solidity, GraphQL, MongoDB, Hardhat, Post-Quantum Cryptography (SLH-DSA), TypeORM, Mocha, Chai
