

Jeevan Siddharth R

<https://www.linkedin.com/in/jeevansiddharth/> • +91 7338773925 • jeevansiddusb@gmail.com • India

Software Engineer specializing in scalable, structured **backend architectures** and high-performance **distributed systems**.

Deeply proficient in TypeScript and **NestJS**, with proven experience building fault-tolerant **orchestration engines** and **long-running workflows**. Adept at **0-to-1 engineering**, from designing **data models**, optimizing low-level system performance, and bridging complex technical architecture with product-driven business logic.

WORK EXPERIENCE

Vlinder Labs | Software Engineer • Bangalore, India

07/2023 – Present

Backend Systems & Algorithms

- **System Architecture:** Engineered a modular backend using **Hexagonal Architecture** and **NestJS**, ensuring strict separation of concerns between **business logic, database, and transport layers**.
- **Reusable Domain Modules:** Architected a **plug-and-play** onboarding service utilizing the **Ports and Adapters** pattern, enabling any internal project to integrate seamlessly, out-of-the-box user onboarding via custom configurations with **zero code rewrite**.
- **Complex Orchestration:** Implemented **Temporal.io** to manage long-running, **durable workflows**, ensuring fault tolerance and state recovery for critical asynchronous tasks.
- **Graph Algorithms (CPM):** Designed a project planning engine using **Directed Acyclic Graphs (DAGs)** and the **Critical Path Method (CPM)** to calculate task dependencies and timelines for complex schedules dynamically.
- **Security & Auth:** Secured distributed services by robust **AuthN/AuthZ** pipelines, implementing **OAuth 2.0** with **PKCE** for secure client flows, alongside JWT-based SSO and granular **RBAC/ABAC** access policies.
- **AI-Driven Velocity:** Integrated advanced AI assistants into the development lifecycle to automate **recurring flows**, allowing more bandwidth to focus on problems that demand **human insight** and **deeper technical reasoning**.

Distributed Systems & Infra

- **Quantum Engineering:** Architected a custom **distributed systems open-source fork** integrating **SLH-DSA (Post-Quantum Cryptography)**, rewriting the core data payload structure to handle quantum-safe signature payloads.
- **Performance Optimization:** Achieved a **500%** increase in system throughput for a network by enabling compiler-level optimizations (**O3 flags**) in the build pipeline, reducing cryptographic verification time from **30ms to 3ms**.

Ethereum Core (Go-Ethereum)

Open Source Contributor • Remote

06/2025 - Present

- **High-Stakes Distributed Systems:** Recognized in the **Top 100 contributors** (10+ merged PRs) to the primary implementation of a **globally distributed, fault-tolerant network** securing over **\$300B** in assets. ([contributions](#))
- **Core Protocol Engineering:** Architected and integrated complex state-transition logic into the core codebase, Optimized RPC APIs by embedding metadata and validating execution against test suites ([PR #33832](#), [PR #33709](#)).

National Engineering College / Tech Summits

Visiting Mentor & Technical Speaker • India

01/2024 - Present

- **Curriculum Design:** Served as an Industry Mentor for a 3-credit academic course, designing the syllabus and guiding 50+ students through **Backend and Web3**.
- **Public Speaking:** Delivered keynotes and technical workshops at regional tech summits, educating **500+ attendees** on **consensus mechanisms** and **Distributed Systems**.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering • Anna University - NEC India

- Achieved a CGPA of **9.1/10**, **graduated with honors**, ranking in the **Top 5%** of the graduating cohort.

SKILLS AND AWARDS

- **STRAT-EX (Chainlink Hackathon):** Collaborated with a 5-person **global team** across **4 countries** to architect and deploy an **automated, decentralized agent** that leverages real-time data feeds to execute optimized transaction operations autonomously.
- Achieved **Institution Rank 1** on GeeksForGeeks, solving 3000+ DSA problems across various platforms.
- **Languages & Technologies:** TypeScript (NestJS), Go, Solidity, GraphQL, MongoDB, Hardhat, Post-Quantum Cryptography (SLH-DSA), TypeORM, Mocha, Chai, React
